## PERSONAL PROJECTS

### Pizza Delivery - Live

- A front-end web app made with react to demonstrate the use of various react functionalities .
- Fetched the products api in home page to display the pizza's you can also add to cart
- the cart count increase and it is stored in the local storage so even if page reloads the cart count will not affect.
- In the cart page when you click on increase button it will also add the total price and vice versa

### Daily Goals - Live

- A project made with react js to write your daily goals to increase productivity.
- You can write the title and description of your daily goal and once you add it will show below the data is stored in local storage so it will not get lost till you click the delete button.
- made it mobile responsive

### Color Palette - Live

- A React based project build to make ui developer life easy.
- when we design some new ui we have to take care of every color and it's shade so i've made this web app that anyone can use .
- when you copy on any color it will get copied in the clipboard made it mobile responsive.

### Youtube Thumbnail Downloader - Live

- I've made this static website to download the thumbnail of youtube video.
- used jquery and javascript in this project.
- when we paste our youtube link in the input box it will fetch fast than a sec and you can also instant download it when click on download button.
- Added meta and meta description tags related to the keyword for seo purpose.
